Application Level Qos across Networks and IT  
- Enterprise Service View

John Wittgreffe

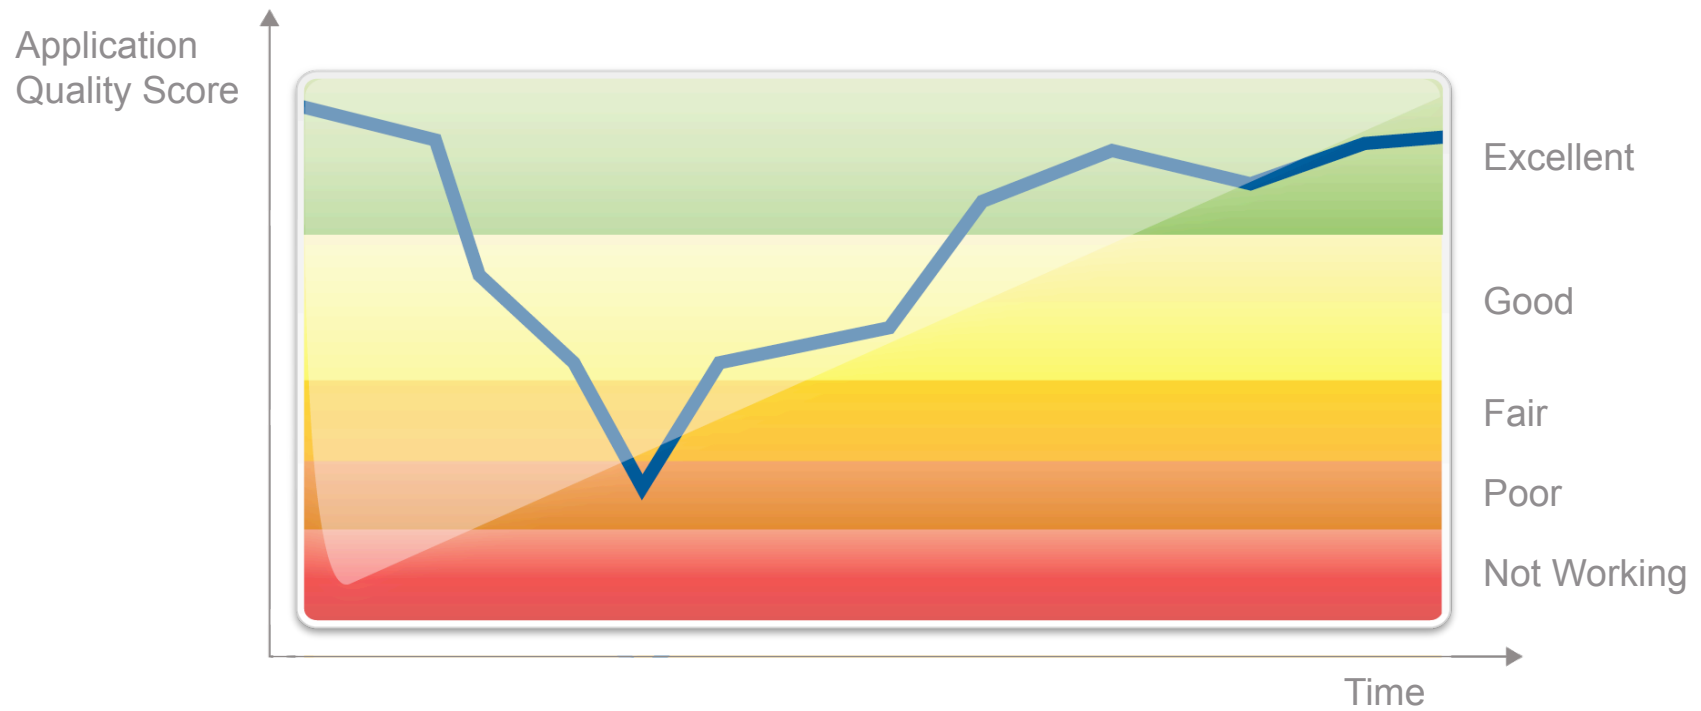

How can I assure the performance of my business applications ...

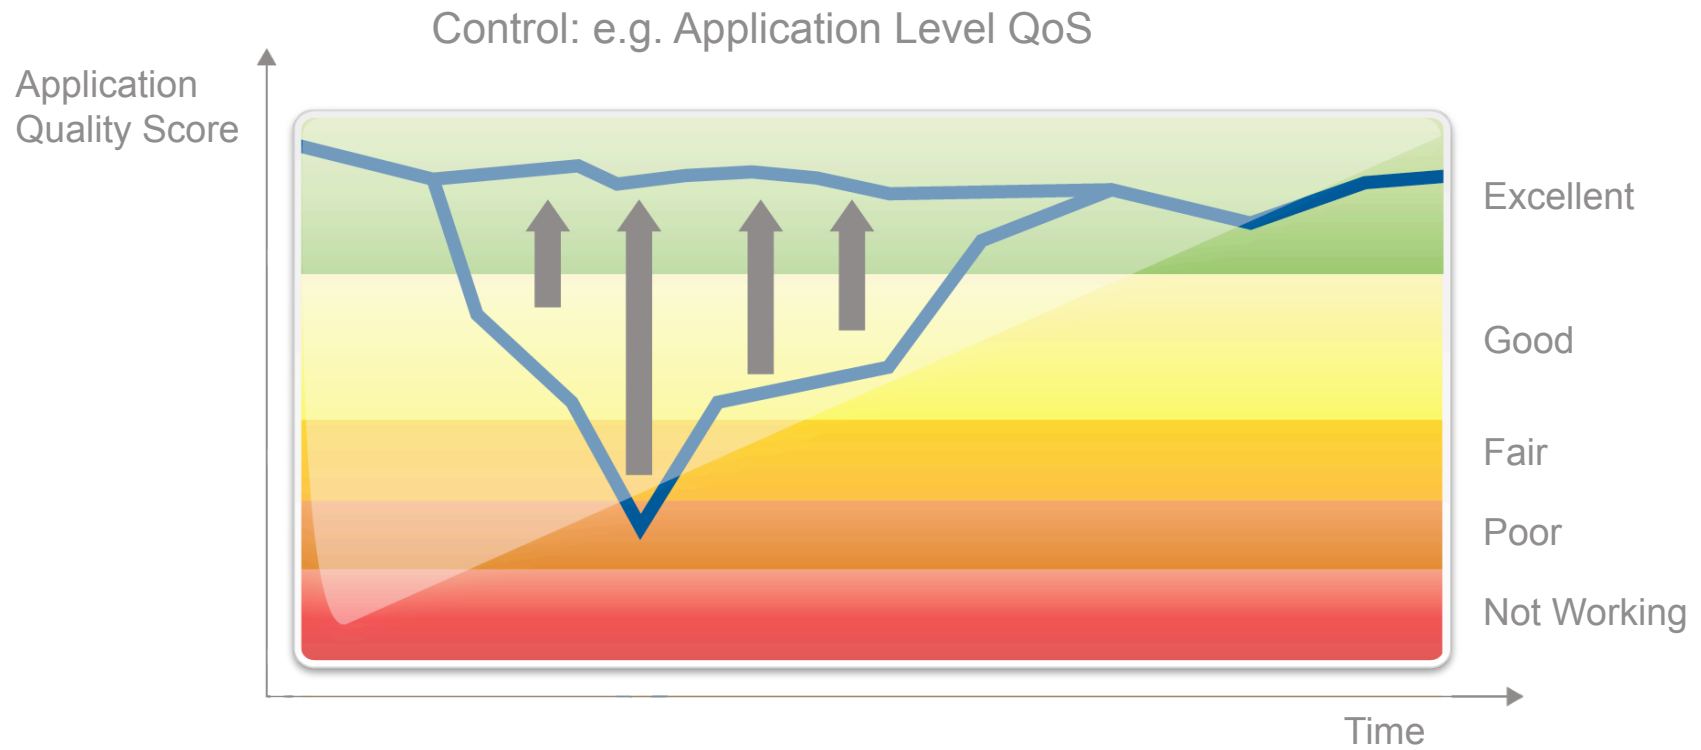

... end to end across complex network, computing, and storage infrastructure?

# Measure user experience of the application

---

# Control to prevent performance problems

# Application Quality Measures

Application			Quality Scoring			
APPLICATION	CRITICALITY	TYPE	BW (kpbs)	DELAY (ms)	JITTER (ms)	LOSS (%)
SAP	TOP	Transac.	50	100 - 300	n/a	1 - 3
VoIP	HIGH	Real Time	MOS Score			
ORACLE	HIGH	Transac.	20	100 - 300	n/a	1 - 5
LDAP	MEDIUM	Data Trans.	20	200 - 1000	n/a	1 - 5
Web	MEDIUM	Data Trans.	20	200 - 1000	n/a	1 - 5
Other	MEDIUM	Data Trans.	10	200 - 1000	n/a	1 - 5
FTP	LOW	Data Trans	25	n/a	n/a	1 - 10
NETBIOS	LOW	Data Trans	50	n/a	n/a	1 - 10
EMAIL	LOW	Data Trans	25	n/a	n/a	1 - 10

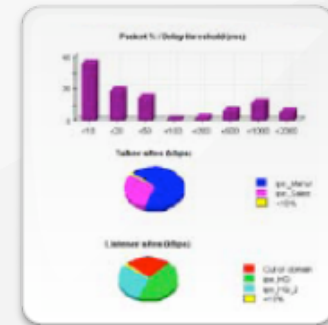

- a) A “MOS” for any application based on underlying performance statistics
- b) *This must* be complemented by examining the payload for correctness

# With detailed application performance audit, real time monitoring, trending, and diagnosis

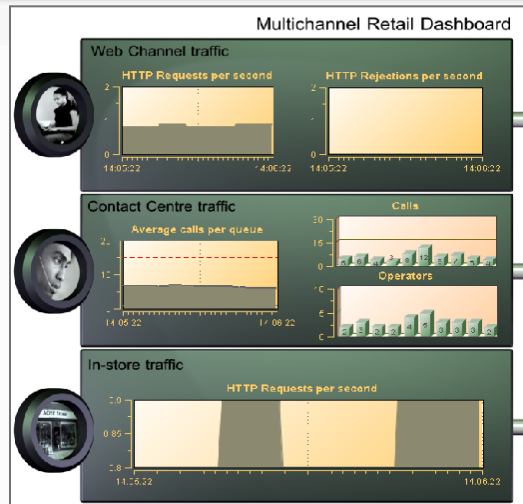

## Root Cause

## Trends & Predictions
