

Signal Processing for Communications Symposium

SYMPOSIUM CHAIRS AND CO-CHAIRS:

Hai Lin, Osaka Prefecture University, Japan, lin@eis.osakafu-u.ac.jp

Jemin Lee, DGIST, Korea, jmnlee@dgist.ac.kr

Dania Marabissi, Università degli Studi di Firenze, Italy, dania.marabissi@unifi.it

SCOPE AND MOTIVATION

Signal processing is an integral part of the development of most of the modern communication technologies. Advanced signal processing algorithms are designed, and modules are developed to provide innovative solutions to contemporary and emerging communication systems. Considering the diverse and fast-growing nature of research in this field, the Signal Processing for Communications symposium welcomes original contributions in all pertinent aspects of signal processing for communications, including design, analysis, implementation, and application.

TOPICS OF INTEREST

The issues covered in the Signal Processing for Communications Symposium are broad, spanning from traditional transceiver design to state-of-the-art signal processing methodologies in contemporary and emerging communication systems, and the application to new frontiers including cognitive radios and smart grids. Our intention is to provide a comprehensive coverage of signal processing methodologies, theories and practices in prevalent and next-generation communication systems and networks. Topics of interest to the Signal Processing for Communications symposium include, but are not limited to:

- Signal processing techniques in 5G/B5G
- Spatial transmission and distributed transmission techniques
- Multi-antenna (SIMO, MISO, MIMO, Massive MIMO), multi-user, centralized/distributed multi-node systems
- Signal processing techniques for full-duplex communications
- Signal processing for Quality of Service based Applications

- Signal processing for Quality of Experience based Applications
- Signal processing for Multimedia services
- Signal processing for Over the Top flows
- Interference cancellation techniques in communications systems including NOMA
- Decentralized and cooperative signal processing in networked systems
- Signal processing for single-carrier, OFDM/OFDMA, multicarrier systems including new waveforms
- Signal processing for green communications, energy harvesting and wireless power transmission
- Signal processing for security enhancement particularly physical layer security
- Channel estimation and equalization
- Signal transmission, detection and synchronization
- Spectrum sensing, shaping, and management techniques
- Novel architectures for signal demodulation and decoding
- Compressive sensing algorithms
- Signal processing techniques for commercial/standardized and emerging systems
- Signal processing for sensor networks and IoT applications
- Signal processing for software defined and cognitive radio
- Adaptive antennas and beamforming
- Signal processing for optical communications
- Signal processing for millimeter and Tera-Hz communication systems
- Signal processing for smart grid and powerline communications
- Localization, positioning and tracking techniques

- Signal processing for data analytics and machine learning.

IMPORTANT DATES

Papers Submission: 15 April 2020

Notification: 25 July 2020

Camera Ready and Registration: 1 September 2020

SUBMISSION INSTRUCTION

All papers for technical symposia should be submitted via EDAS through the following link: <https://edas.info/N27054>
