Selected Areas in Communications Symposium:

Track on Access Systems and Networks

Call for Papers

Track Chair:

Ahmed E. Kamal
Department of Electrical and Computer Engineering
Iowa State University
Ames, IA 50011 USA

Scope and Motivation

Access systems and networks have been, and continue to be some of the most active fields of telecommunications research and development. Emerging new services and networking paradigms are contributing to the continued interest in these systems. Advances in Voice over IP (VoIP), IPTV, conventional and high-definition video, and multimedia have significantly impacted the access segment of service-provider networks. Moreover, many access lines today terminate on multiple home devices. This led to a need for home networks that are designed for a blend of multi-computer Internet access, multi-platform entertainment, and voice and video support. The evolution towards multi-service platforms and the emergence of a spectrum of new IP-based applications are fueling more demand for bandwidth, and access networks and system must grow to match this demand. Such systems typically consist of a diverse set of transmission technologies and associated networking functions, which are typically far more complex than those found in other parts of the network. Further more, putting these diverse components together creates technological challenges in the access domain. As service providers, Telcos and Cable MSOs alike, face the challenge of triple and quadruple play delivery (voice, data, and video to end customers; over wired and wireless networks), researchers in both academia and industry must develop innovative solutions to tackle these challenges.

The aim of the Access Systems and Networks (ASN) Track of the Symposium on Selected Areas on Communications is to provide a forum that brings together scientists and researchers from all over the world to present their cutting-edge innovations in all aspects of the field. Papers on practical applications and R&D results from industry and academic/industrial collaborations are particularly encouraged.

Main Topics of Interest

To ensure complete coverage of the advances in the field, the ASN Track of the SAC Symposium solicits original contributions in, but not limited to, the following topical areas:

- Twisted pair copper systems and networks; xDSL
- Hybrid Fiber Coaxial (HFC) systems and networks
- FTTx and Passive/Active Optical systems and networks (PONs and AONs)
- Cable TV systems and networks
- Wi-Fi, WiMAX, and Cellular Access
- 5G and beyond 5G front/mid-haul networks
- Flexible and on-demand access networks
- Personal area networks, including Bluetooth and Zigbee
- Integrated wired/wireless access
- Access networks integration in the Internet of Things (IoT)
- Optical-Wireless integration and radio over fiber
- Free-Space Optical-Access (components, systems, and networks)
- Digital satellite access technology
- Access network architectures and protocols
- Service convergence and multimedia networks
- Quality of Service (QoS): characterization and provisioning
- Access network survivability and security
- Municipal and community networks
- Power Line Communication (PLC)
- Home Networks
- Networked appliances
- Applications (video streaming/IPTV etc.)
- Synchronization (time & frequency) support in the access
- Billing and management aspects of access systems and networks
- Standardization of access systems and networks
- Performance evaluation of access systems and networks
- New technologies and architectures in access networks

IEEE GLOBECOM 2020
IEEE Global Communications Conference
7-11 December 2020 • Taipei, Taiwan
Communications for Human and Machine Intelligence

Important Dates

- Paper submission: 15 April 2020
- Acceptance Notification: 25 July 2020
- Camera-Ready: 1 September 2020

Submission Instruction

All papers for technical symposia should be submitted via EDAS through the following link:
https://edas.info/N27054
